DEGLI STUDI DI MILANO-BICOCCA

COURSE SYLLABUS

Internship in Department of Gnatology 1

2122-3-H4601D062

Aims

To understand the function of the masticatory system, to learn diagnostic principles through to final rehabilitation, exploring different methods of instrumental analysis such as electromyography, baropodometric platform, including anamnestic data, laboratory analysis and radiologic/imaging exams.

Contents

Detailed program

Evolution of the masticatory system

Occlusal function and dysfunction

Occlusion and malocclusion

Anatomy of TMJ

Radiology & Imaging

Bruxism

Realization and balancing of oral splints

Electromyographic analysis

Osteopathy of TMJ

Prerequisites

Teaching form

Internship

Textbook and teaching resource

Semester

3rd year

Assessment method

Constant and participatory attendance of the course.

Office hours
