SYLLABUS DEL CORSO

Occupational Medicine - Uoc Medicina del Lavoro PGXXIII Hospital Bergamo

2526-3-H4102D106

Aims

The objectives of the internship are:

- To understand the clinical activities carried out in the field of Occupational Medicine, with particular focus on health surveillance, prevention of occupational risks, and diagnosis of work-related diseases (DdD1)
- To apply theoretical knowledge in interpreting clinical cases observed during the internship and relating them to specific occupational exposure contexts (DdD2)
- To develop awareness of the role of the occupational physician within the prevention system and of their interaction with other healthcare and workplace professionals (DdD1)

Contents

The student will support an occupational physician (tutor) during the following activities:

- Company Health Service
- Medical surveillance (medical examination + diagnostic tests) for workers exposed to occupational risks
- Diagnosis and management of occupational diseases
- Management of infectious diseases among workers

Detailed program

The student will be involved in the activity of the Company Health Service, supporting a doctor (tutor) from the occupational medicine department. The student will work alongside an occupational doctor in carrying out the medical examinations and necessary diagnostic tests required by the health surveillance protocols for workers exposed to occupational risks. The student will be involved in the second level activity, including the diagnosis and management of occupational diseases. Finally, the student will participate in the management of infectious diseases in healthcare professionals.

During the internship period, the student will participate in all the different activities of the occupational health department.

Prerequisites

It is recommended that the student has already passed the Occupational Medicine examination.

Teaching form

The student will support an occupational physician (tutor) during all daily activities.
