DEGLI STUDI DI MILANO-BICOCCA

## SYLLABUS DEL CORSO

### **Fisiologia del Sonno, Patologie Sonno-correlate e Complicanze Sistemiche**

1819-5-H4101D316

---

#### **Aims**

Increase the knowledge about sleep physiology and influence of sleep on cardiovascular systems, both in physiological and pathological conditions.

#### **Contents**

Sleep Medicine is a relatively recent discipline that has been introduced throughout Europe in the training of health workers. The knowledge of sleep physiology and of the main sleep disorders provides the student important diagnostic-therapeutic tools with potential effects on the general health status of the patients. The most prevalent sleep disorder, besides insomnia, is certainly the Obstructive Sleep Apnea Syndrome (obstructive sleep apnea syndrome), which includes a wide spectrum of clinical conditions that are related to upper airway narrowing during sleep, particularly in obese and overweight patients. OSAS is a pathology with increasing frequency: about two million people in Italy are affected by this disease. Excessive daytime sleepiness is often referred to by OSAS patients, with reduced performance at work and driving. Furthermore, increasing evidence supports the close link between sleep disorders, in particular sleep-related breathing disorders, to the cerebral and cardiovascular diseases. High prevalence and important complications related to OSAS stimulate a growing awareness by clinicians and students and nursing staff.

#### **Detailed program**

#### **Prerequisites**

Medical students at 5rd year

## Teaching form

Teaching methodology:

- Theoretical lessons (slides, power point presentations by teachers with Sleep disorders expertise )
- Theoretical and practical training in the use of dynamic monitors for sleep and cardiovascular parameters

## Textbook and teaching resource
