

COURSE SYLLABUS

Laboratory 4 - Prevenire le dipendenze

1920-3-E3901N060

Learning objectives

Trough participants' active involvement (theoretical and practical knowledge exchange), the workshop is aimed at:

- Providing tools of knowledge useful for analysing the present and evolving scenario of drug use/addiction phenomenon at international, national and regional level (with particular reference to the social-health Reform ex l.r. 23/15 implementation guidelines addressing health promotion, behavioral risk factors prevention, supply and demand governance, social inclusion policies and programs.)
- Targeting the areas for prevention interventions (at universal, selective , indicated and environmental level) that can actively engage Social Workers profile, starting from training and stage period
- Experience site visits and occasions for action-research at the local level planning

CONTENTS

- What is the problem? What does drug prevention mean at present?
- Data on present situation and evolving scenario of drug use phenomenon
- Risk and protective factors
- Health Promotion, behavioral risk factors prevention, chronic diseases prevention
- Universal, Selected, Indicated prevention
- Social inclusion policies and programs within Lombardy territory
- Risk identification and early intervention
- Local Planning in health promotion and prevention
- Resources mobilization at local level

- Lombardy Drug Addiction Action Plan
- Drug and behavioral addiction within the new organisational and legislative scenario (L.R. 23/15 social-health Reform implementation, Regional Prevention Plan 2015-19; updated Assistance Essential levels)

- Other contents suggested by participants

DURATION

The workshop has a duration of 24 hours

Contents

Substance use and other behavioral addictions are a phenomenon in continuous evolution and change. The rapid mutations of the epidemiological and socio-cultural scenario force people working in the social field to identify approaches, contexts, settings and tools able to face the present and medium-long term challenges, mixing prevention interventions targeted to individuals and communities together with strategic activities aimed to promote health into life and social group contexts.

“Prevention is better than cure” can be a meaningless statement if “prevention practice” is not intentionally oriented to achieve specific, realistic, feasible and sustainable goals. In consideration of problematic gambling, alcohol and drugs, planning and designing prevention is a sophisticated technical act that requires specific and appropriate skills, attitudes and tools. Moreover, prevention programs, activities and interventions, in order to be effective, must be part of a strategic and promotional vision that recognizes and gives value to the characteristics and resources of the identified contexts and target population, using an ecological and systemic approach to tackle the modern society complex needs.

Within the contextual raising of legislative frameworks for the substance use regulation, some good opportunities show up to experiment prevention approaches informed by evidence-based knowledge and ethical principles in respect of drug users rights. A growing consensus on that drug use onset is a socially defined event, experimented by individuals within specific structured social contexts, is associated to the importance of preventing problematic drug use rather than preventing drug use in general. This becomes a useful framework for the development of effective drug prevention approaches, based on all stakeholders’ rights, new strategies of meaning, social mediation and balance between existing multicultural points of view and values.

In order to tackle such a complex and continuously changing issue, it is crucial to define innovative ways of intervention and collaboration, integration and coordination of all different stakeholders (not exclusively, as traditionally occurred, the School Education system or Social Services for vulnerable adults, but Civil Society at each different level, industry system, all sectors of the Public Administration– with particular attention al local and regional level – Media and politics.)

Even more so in the context of the present political-institutional change and social-health care system reorganization at national and regional level, Social services and practitioners in this field (included the ones in training) are asked to “reset” themselves and identify new opportunities of action and intervention, within a scenario of constant economic crisis that sharpens the classic needs while highlighting new dimensions and characteristics. It is thus essential that (also) future Social Workers approach the issue with a long term view on their own role and operate: technical practice, rigorous planning, capability of action and interaction at a territorial level, in fact, constitute the key factors of a work too often, especially in the drug addiction field, left to spontaneous, improvised (and ineffective) approaches.

Detailed program

- What is the problem? What does drug prevention mean at present?
- Data on present situation and evolving scenario of drug use phenomenon
- Risk and protective factors
- Health Promotion, behavioral risk factors prevention, chronic diseases prevention
- Universal, Selected, Indicated prevention
- Social inclusion policies and programs within Lombardy territory
- Risk identification and early intervention
- Local Planning in health promotion and prevention
- Resources mobilization at local level
- Lombardy Drug Addiction Action Plan
- Drug and behavioral addiction within the new organisational and legislative scenario (L.R. 23/15 social-health Reform implementation, Regional Prevention Plan 2015-19; updated Assistance Essential levels)

Other contents suggested by participants

Prerequisites

The workshop is open to third-year students.

Teaching methods

The workshop will focus and deepen these aspects through lectures and workgroups in plenary, opportunities for research and experimentation at individual level or in small groups to be held in the classroom and on the field (following participants' interests, attitudes, skills). It will also propose site visits and meetings with opinion leaders and policy-makers, to enhance theoretical knowledge with concrete and field applications.

Particular attention will be given to examine in depth national and regional legislation on drugs, the most effective approaches and methods of planning and designing interventions, the analysis of innovative international/national projects. Recommendations from scientific literature to increase the quality in prevention at local level planning will be explored.

Assessment methods

Evaluation will be based on the level of active participation in the classroom and on the materials produced by Students, individually and/or in groups.
