

UNIVERSITÀ
DEGLI STUDI DI MILANO-BICOCCA

SYLLABUS DEL CORSO

Scienze di Laboratorio

1920-2-I0302D008-I0302D029M

Aims

Student's Skills:

- to recognise the role, limits and aims of laboratory analysis, variability causes and errors
- To describe the plasma proteins study and diagnostic enzymology
- to define the role of diagnostic tests in diabetes, in cardiovascular, thyroid, hepatic diseases,
- To describe Pregnancy and kidney lab monitoring
- To describe electrolytes, acid-base balance study
- To describe Urine exam, proteinuria and CSF tests

Contents

The goal of the course is to provide the knowledge about roles, limits and aims of laboratory tests, Good Laboratory Practise, variability and errors, quality control. Fundamentals of protein study and diagnostic enzymology. Lab tests for the study of diabetes, cardiovascular, thyroid pathologies, hepatic, pregnancy, kidney physio-pathology, hydro electrolytic and acid-base balance. CSF and urine exam.

Detailed program

- Lab tests: which, how and when.
- Good Laboratory Practice, variability and errors, quality control.
- Diabetes, Obesity e Cardio-vascular risk monitoring.
- AMI diagnostics.
- Thyroid, plasmatic protein, electrolytes, acid-base balance study.
- Kidney physio-pathology.
- Creatinine and GFR.
- Urine exam and proteinuria.
- CSF tests.
- Diagnostic Enzymology.
- Hepatic Diagnostics.
- Pregnancy lab monitoring.

Prerequisites

Objectives of the course of Clinical Biochemical Analysis (these are the courses indicated in Regolamento)

Teaching form

Lectures, exercises

Textbook and teaching resource

Spandrio L. Biochimica Clinica Ed Sorbona.

Henry JB, et al. Clinical diagnosis and management by laboratory methods. Saunders Elsevier.

Prencipe L. Approccio alla Chimica Clinica.

Teachers will provide educational material

Semester

First semester

Assessment method

Oral test aimed at evaluating global knowledges about course program

Office hours

By appointment
