

UNIVERSITÀ DEGLI STUDI DI MILANO-BICOCCA

SYLLABUS DEL CORSO

Clerkship 2

1920-1-H4102D008

Aims

Students will be able to understand the basic biochemical techniques, to prepare a biochemistry assay of protein, lipid or sugar, under the supervision of qualified laboratory staff and by using an "on field" approach. The last lesson will consist in the discussion of clinical cases based on the biochemical knowledge learned during the course "Biochemistry"

Students will be able to understand the basic histological techniques, to prepare histological samples for the observation of the structure and ultrastructure of the main biological tissues, under the supervision of qualified laboratory staff and by using an "on field" approach.

Students will receive the practical, theoretical and IT skills to analyse and to correctly understand the experimental data. This knowledge will form the primary basis for a rationale approach to the knowledge of medical sciences.

Students will be able to demonstrate the position of palpable landmarks of the different regions and will acquire knowledge of the characteristic features, organ content and 3-D arrangement of the head, neck, thorax, abdomen, pelvis and limbs.

The general features of the systems further described in detail in "Locomotor system diseases", "Cardiovascular and Respiratory diseases", Digestive health", "Endocrine, Kidney and Urinary tract diseases" and "Mother and Child" will be addressed.

Contents

The students are introduced to the main biochemical techniques and to the instruments, reagents and materials needed for biochemistry assay (to analyse protein, lipid and sugar).

The students are introduced to the main histological techniques and to the instruments, reagents and materials needed for histological analysis.
Introduction to OriginLab Program
Data import procedures
Data Visualization
Mathematical models and fitting procedures
Analysis of patient data to determine physiological parameters.
Students will be introduced to the principles of regional anatomy and general principles of systematic anatomy, with specific reference to clinical anatomy
Detailed program
Protein assay.
Lipid assay: Thin Layer Chromatography (TLC)
Sugar assay: Blood sugar level
Clinical cases discussion.
Flow cytometry to describe tissues properties
Principles of light microscopy
Principles of electron microscopy
Principles of confocal microscopy
Preparation of biological samples for immunohistochemistry, immunofluorescence, histological analysis
Instruments for hematological and blood chemistry analysis

Data import procedures

Generation of numerical matrices for data management Displaying data Introduction to the different ways of graphic representation Graphs in linear logarithmic and bilogarithmic scale Mathematical models and methods of fit Analysis of patient data to determine physiological parameters Analysis of respiratory data Analysis of data of blood parameters Analysis of Electrophysiological data Principles of regional anatomy of: head and neck thorax abdomen pelvis and perineum lower limb upper limb Principles of radiologic anatomy. Principles of clinical anatomy **Prerequisites** College-level scientific knowledge and basic knowledge of mathematics and analysis and IT.

Importing simple text files

Teaching form

Recognition of different data storage formats

Lessons, seminars, laboratory practice

Textbook and teaching resource

See each module for specific textbooks and teaching resources

Semester

2nd term

Assessment method

Assessment of the achievement of planned objectives on the basis of the attendance/participation to the laboratory activities.

Knowledge and skills will be further assessed during the "Basic sciences" and "Fundamentals of Human Morphology" examinations, with the modalities there described

Office hours

Mon-Fri 9AM-5PM, by appointment
