UNIVERSITÀ
DEGLI STUDI DI MILANO-BICOCCA

COURSE SYLLABUS

Principles of Medical Semeiotics

2021-2-H4101D011-H4101D032M

Aims

Knowing how to make a complete history collection and learn the semeiological techniques for an accurate general objective examination of the patient and specific for the abdomen chest heart

Synthetic contents

The Semeiotic Course on Simulator carried out with practical exercises with dummies-simulators is aimed at the first learning of the techniques of approach to the patient and the main semeiological maneuvers to be applied in the objective examination, in preparation for the future professional activity carried out in the following years directly on the patient. The tutoring activity involves small groups of students, with the constant presence of the teacher in order to provide the basis for the first approach to theoretical knowledge and to the practical learning of multiple medical, surgical and emergency semeiological maneuvers.

Detailed plan

- general approach to the patient

- Anamensis physiological, pharmacological anamnesis, familial, proximal pathological and remote pathological

Objective examination

Inspection percussion palpation and auscultation of:

-heart

-Chest

-abdomen

Detection of vital parameters with particular emphasis on the methods and techniques of blood pressure measurement

Prerequisites

Knowledge of the introductory courses indicated in the Degree Course regulations

Teaching mode

Lectures, exercises

Teaching materials

Slides

Teaching delivery period

II semester

Evaluation

Oral exam and practical test

Office hours

On appointment
