

UNIVERSITÀ  
DEGLI STUDI DI MILANO-BICOCCA

## SYLLABUS DEL CORSO

### Laboratorio di Fisica I

2021-1-E2701Q059

---

#### Aims

Aim of the course is to give the basis of Experimental Physics through experiments of Mechanics and Thermodynamics and to learn statistics and error analysis.

#### Contents

The first part of the course is based on lectures on statistics: Analysis of experimental data, random and systematic errors, Distributions, Probability and confidence. The second part of the course is carried out in laboratory, by making basic Physics experiments

#### Detailed program

The first part of the course is based on lectures on statistics: Analysis of experimental data, random and systematic errors, Distributions, Probability and confidence.

The second part of the course is carried out in laboratory, by making the following basic physics experiments

- 1 DENSITY
- 2 BINOMIAL AND GAUSSIAN DISTRIBUTIONS

3 MOMENT OF DI INERTIA  
4 STANDING WAVES  
5 ELASTICITY  
6 RADIOACTIVE DECAY  
7 PENDULUM  
8 NEWTON'S LAW OF COOLING  
9 INERTIAL BALANCE  
10 POISSON DISTRIBUTION

## **Prerequisites**

None

## **Teaching form**

Lessons and activity in laboratory

In case of limitations due to Covid-19 emergency the lessons will be given in asynchronous remote registration, the laboratory activities will be given in synchronous videoconferencing.

## **Textbook and teaching resource**

J.R. Taylor, *Introduzione all'analisi degli errori*, ed. Zanichelli

Tutorial video (e-learning page of the course)

Laboratory notes (e-learning page of the course)

## **Semester**

March-June 2021

## **Assessment method**

Final Oral exam: discussion on the experimental activity based on a detailed laboratory report

## **Office hours**

On request contacting the teacher: [m.martini@unimib.it](mailto:m.martini@unimib.it)
