

UNIVERSITÀ
DEGLI STUDI DI MILANO-BICOCCA

SYLLABUS DEL CORSO

Fisiologia Generale

2021-2-E1301Q074

Aims

1. Knowledge and comprehension. The course brings the students to understand the fundamental physiological mechanisms of the animal organism.
2. Applied knowledge and comprehension. These concepts are indispensable for further studies in Systems Physiology, Pathology and Pharmacology.
3. Making judgements. The student will learn to apply the fundamental physiological knowledge to the different pathophysiological contexts.
4. Communication skills. Being able to properly explain the basic concepts.
5. Learning skills. The acquired physiological concepts and notions will enable the student to further pursue personal studies.

Contents

- 1) Fundamentals of biophysics and transport mechanisms.
- 2) Cell physiology and neurophysiology.
- 3) Muscle physiology.
- 4) Sensory mechanisms.
- 5) Sensorimotor integration in the central nervous system.
- 6) Introduction to the regulation of different organs by the autonomic nervous system; endocrine mechanisms.

Detailed program

- 1) Fundamentals of biophysics and cell physiology, diffusion and transmembrane transport (active and passive, osmotic fluxes, volume and pH control).
- 2) Mechanisms of excitability and chemical and electric communication intra- and intercellular. Action potential and synaptic function.
- 3) Function and regulation of the muscle tissue with special reference to the skeletal muscle. Introduction to cardiac physiology.
- 4) Mechanisms of transepithelial transport.
- 5) Sensory systems physiology (somatosensory, visual, olfactory, auditory and taste). Neuromuscular physiology: reflex arc, central synaptic integration, introduction to motor control.
- 6) Organization of the global nervous and endocrine control of organic functions (autonomic nervous system, hypothalamus and hypophysis).

Prerequisites

Citology and Anatomy. Physics. Biochemistry.

Teaching form

Oral lessons.

Textbook and teaching resource

Randall et al. Animal Physiology. Freeman. Transparencies and video recordings will be made available on E-learning.

Semester

Second semester

Assessment method

There are no in itinere tests. The oral exam consists of several questions aimed at verifying the student's comprehension of the basic physiological concepts and mechanisms.

Office hours

Appointment by E-mail (andrea.becchetti@unimib.it)
