COURSE SYLLABUS

Elements of Prosthesis

2021-2-I0301D031-I0301D036M

Aims

Indications and treatment plans in fixed, mobile and combined prostheses on natural teeth and dental implants.

Contents

Analysis of patient's treatment with a prosthetic point of view.

Clinical protocols for the maintenance of different types of dental prosthesis.

Detailed program

- Treatment plan: indications for a prosthetic rehabilitation.
- Fixed prosthetic rehabilitation: analysis and selection criteria of prosthetic abutments, teeth preparation techniques and types of dental restorations (single crowns, bridges, inlays and veneers), maintaining techniques and follow-up
- Mobile prosthetic rehabilitation: analysis of different types of dental mobile devices (complete denture, partial denture and telescopic denture), maintaining techniques and follow-up
- Implant prosthetic rehabilitation: types of implants, analysis of different types of implant restorations (overdenture and fixed prostheses), maintaining techniques and follow-up.

Prerequisites

Basic knowledge of the indications of different treatment plans

Teaching form

Lectures.

In the Covid-19 emergency period, asynchronous lessons from remote with frontal lectures classes, when possible.

Textbook and teaching resource

Semester

First Semester

Assessment method

Oral exam

During the Covid-19 emergency period, oral exams will be online, carried out using the WebEx platform.

Office hours

Wednesday from 8.30 to 12.00 by appointment
