COURSE SYLLABUS

Social Structure and Process of Economy

2021-2-E4001N114

Learning objectives

The course has two main objectives:

giving elements for the theoretical understanding of the social dimension of economic life;

giving tools for knowledge and analysis of some empirical domains in which social and economic relations, and their transformations, are particularly relevant today

Contents

The sociological study of economic phenomena: the classics

Karl Polany and the great transformation

The financial capitalism

The foundational economy

The empirical field: the social innovation

Detailed program

The first part of the course provides the basic elements for the sociological study of economic phenomena, presenting and discussing the most important approaches in classical theories.

Afterwards we will outline the main features of the so called financial capitalism.

Then we will deepen a specific current approach (the foundational economy) and will discuss its potential of analysis by referring in particular to the Italian case.

The third part of the course is devoted to the case of the social innovation as an empirical field exemplifying themes and issues related to the social dimension of the economy

Prerequisites

Good skills in learning, writing and oral communication.

Teaching methods

Lectures and exercises

Assessment methods

Written and optional oral examination.

Textbooks and Reading Materials
