COURSE SYLLABUS

Statistics II

2021-2-E4101B038

Learning objectives

At the end of the course students are expected to 1) apply correctly a variety of inferential statistical techniques both to estimate the parameters of the distribution of a random variable and to test statistical hypotheses, 2) interpret, in plain language, the application and outcomes of these techniques, 3) they should also be able to plan a sample according to some commonly used sampling designs.

Contents

Statistical inference: point estimation, confidence interval and tests of statistical hypotheses. Finite population sampling and inference.

Detailed program

The course is composed of two modules.

Module 1. Statistical inference. Point estimate. Estimation methods and their properties. Maximum likelihood and method of moments. Confidence intervals.

Module 2. Significance tests. Z, t, chi-squared and F tests. P-values. Error probabilities and the power function.

Most powerful tests. Neyman-Pearson lemma. Likelihood ratio tests. Finite population sampling and inference. Sampling designs. Sample size calculation.

Prerequisites

Prerequisites are Probability, Statistics I and Calculus I.

Teaching methods

Class lectures and exercise sessions.

During the Covid 19 pandemic, lessons will be made available via on the University web platforms.

Assessment methods

Students are supposed to pass a written and an oral examination.

The overall mark is obtained by averaging the marks obtained in each part.

The written examination can be replaced by two interim assessments that take place at the end of each module of the course (see the Semester section below).

Exams and assessments during the Covid 19 pandemic will take place on the University web platforms.

Textbooks and Reading Materials

Cicchitelli G., D'Urso P., Minozzo M. 2018. Statistica: Principi e Metodi. Terza edizione. Pearson Italia, Milano-Torino

Further material will be circulated via the e-learning page of the course.

Semester

The course is scheduled in the first semester and is divided into two parts each lasting seven weeks.

Teaching language

Italian
