SYLLABUS DEL CORSO

Translational Approach To Neurological Disorders

2021-2-F0901D047

Aims

The student should be able to integrate basic knowledge regarding the field of neuroscience, besides pathogenic mechanisms, therapeutic goals and present research trends in the main nervous system and cardiovascular diseases.

Contents

This course aims at contributing to the training of a medical biotechnologist able to integrate basic principles of neuroscience in order to understand the biological basis, main pathogenic mechanisms and experimental models regarding nervous system and cardiovascular diseases. Models will be analyzed stressing critical aspects and role in the development of novel therapeutic strategies.

Detailed program

Neuroscience, an integrative approach: (1) structure and function; (2) your brain, your self; (3) thought processes; (4) the dynamic brain; (5) breaking from neurodogma; (6) emerging technologies and challenges;

Neurological disorders, a translational approach: mechanisms and biomarkers of neuronal damage; role of glutamate and GABA in CNS disorders; link between inflammation, oxidative stress and excitotoxicity; physiopathology of stroke and multiple sclerosis; genetics of Parkinson; Alzheimer and amyotrophic lateral sclerosis; molecular mechanisms of neurodegenerative disorders.

Experimental models of vascular injury. Experimental models of coronary atherosclerotic disease. Experimental models of carotid atherosclerosis inducing cerebral ischemia. Experimental models of peripheral artery disease. Experimental models of intimal hyperplasia and restenosis. Experimental models of abdominal aortic

aneurysms. Experimental models of aortic dissection.

Prerequisites

Basic knowledge of anatomy and histology, physiology and general pathology and neuropharmacology.

Advanced knowledge of biochemistry, molecular biology and genetics.

Teaching form

Front lecturing.

Textbook and teaching resource

Slides, scientific papers.

Semester

First semester second year.

Assessment method

Vascular module: Oral examination (WebEx).

Office hours

By email to the Professor.
