COURSE SYLLABUS

Erasmus + Projects Totemm

2021-2-I0102D910

Aims

To design, implement and test an innovative range of virtual mobility digital learning packages to support midwifery undergraduates from across Europe to develop cultural sensitivity, confidence and insight into transnational midwifery practice.

Contents

2. To implement a virtual learning programme for students from each of the higher education partners that fosters interest in transnational cultures, values and beliefs and difference and similarities in midwifery practice

3. To develop and disseminate a model of mobility that supports [students](#) to engage in transnational learning in both virtual learning and physical environments

Detailed program

The project's results will arise from the activities of students and lectures and their interactions. The participation of different higher educational institutes insure an international perspective and will be made available at every level: students, midwives, women and other relevant healthcare education programmes in the project.

To implement a virtual learning program for students from each of the higher education partners that fosters interest in transnational cultures, values and beliefs and difference and similarities in midwifery practice. The virtual learning program is predominantly designated for internal use for students, lecturers, researchers and stakeholders and it represent an important tool to exchange the materials developed during the different phases of project. The seminars and digital platform will be a tool to collect data and disseminate students' products.

Prerequisites

Knowledge of English language.

Teaching form

Seminars, lectures, meetings with the use of innovative teaching methodologies.

Textbook and teaching resource

Teaching material provided during the participation in the project.

Semester

Annual teaching and activity.

Assessment method

Frequency

Office hours

On appointment.
