DEGLI STUDI DI MILANO-BICOCCA

## SYLLABUS DEL CORSO

### Astronomical Instrumentation

2122-1-F5802Q010

---

#### Aims

Let the student be familiar with the functioning of the modern astronomical instrumentation so that she/he can understand the scientific literature related to instrumentation and be aware of the specific characteristics of the instruments getting the data she/is asked to analyze during her/his thesis.

#### Contents

Introduction to the physical principles of operation of telescopes and detectors of electromagnetic, gravitational and particle radiation (cosmic rays).

#### Detailed program

Geometrical optics recals.

Principles of gaussian optics.

Electromagnetic wave polarization: Stokes parameters.

#### Telescopes:

- main optical schemes
- mountings
- angular resolution
- atmospheric absorption

- seeing

**Radio Astronomy:**

- single antenna telescopes
- interferometers
- receivers
- spectrometers
- polarimeters

**Millimetric and Sub-millimetric Astronomy:**

- telescopes
- heterodyne receivers SIS
- bolometric receivers
- TES
- MKIDS

**Infrared Astronomy:**

- telescopes
- adaptive/active optics
- infrared arrays

**Optical Astronomy:**

- telescopes
- CCD cameras
- photometric systems
- spectroscopes

**Ultraviolet Astronomy:**

- Normal and grazing incidence telescopes
- UV CCD
- Micro-Channel Plates
- Avalanche Photo Diodes

**X ray Astronomy:**

- grazing incidence telescopes
- coded mask telescopes

- collimators

#### **Gamma ray Astronomy**

- Cerenkov Telescopes
- Showers detectors

#### **Ionizing radiation detectors:**

- ionization chambers
- proportional chambers
- Geiger
- scintillators
- photomultipliers
- semiconductor detectors

#### **Gravitational antennas**

- Strain Ratio, sensitivity
- Weber Resonators
- Interferometers
  - LIGO
  - VIRGO
  - LISA

#### **Cryogenerators**

Heat transfer: conductivity, convectivity, radiation

T>180K fridges

T<180K fridges

- "wet"/"dry"
- <sup>3</sup>He fridge
- Dilution fridge
- Adiabatic Demagnetization Refrigerator

#### **Astronomical Coordinates**

- Local Coordinates (alt-azi)
- Equatorial Coordinates
- Galactic Coordinates

Detailed analysis of some next generation ground based instrument or space mission suggested by the students

## **Prerequisites**

Physics 1, Physics 2, Physics 3, Structure of Matters

## **Teaching form**

Frontal lessons, eventually in streaming. In any case the lessons are recorded and published on the e-learning page.

## **Textbook and teaching resource**

Video files of the lessons.

Forum for every lessons.

Lesson presentations.

Textbook:

"Electronic Imaging in Astronomy", McLean, Springer 2008

suggested books:

"Radio Astronomy", John D. Kraus, Cygnus Quasar Books

"Radiation Detection and Measurements", Glenn Knol, Wyley

"Observational Astrophysics", Pierre Lenà, Springer

## **Semester**

Second Semester.

## **Assessment method**

Oral exam consisting of two short seminars about contemporary instruments or space missions.

## **Office hours**

Every day by appointment.
