DEGLI STUDI DI MILANO-BICOCCA

## SYLLABUS DEL CORSO

### Cell and Molecular Biology

2122-1-H4102D006-H4102D018M

---

#### Aims

The course will provide the essential basic theoretical knowledge of biology focusing on future applications in the biomedical field.

#### Contents

The content of the course will involve relevant biotechnological techniques and their applications in the biomedical field.

#### Detailed program

The course will involve the study of commonly used and innovative cell and molecular biology techniques and their applications in medical research. This will be done by reading and discussing particularly significant scientific articles that employ such methodologies in order to answer specific biological questions.

#### Prerequisites

Basic scientific knowledge (basic biology, chemistry, physics)

#### Teaching form

Introductory classes followed by presentations and group discussions.

---

### **Textbook and teaching resource**

Primary research articles and reviews

### **Semester**

First semester

### **Assessment method**

Evaluation of presentations and related group discussions

### **Office hours**

By appointment
