DEGLI STUDI DI MILANO-BICOCCA

COURSE SYLLABUS

Internal Medicine 2 C

2122-6-H4101D335-H4101D223M

Aims

The aim of the course is to provide students with the essential practical tools to be able to recognize signs and symptoms of some pathologies, formulate their diagnosis, verify possible differential diagnoses and correctly set their therapy according to the most updated guidelines.

Contents

Clinical manifestations, differential diagnosis, diagnostic process and therapeutic setting of the pathologies listed under "detailed program".

Detailed program

The pathologies that will be treated are the following:

Adrenal insufficiency, clinical framework and follow-up of the adrenal adenoma

Pulmonary thromboembolism

Hyponatremia

Anemia

Recently published studies on specific aspects of the pathologies treated will also be presented.

Prerequisites

Knowledge related to the preparatory courses indicated in the regulations of the University.

Teaching form

Frontal lessons, subjected to any ministerial changes following the COVID pandemic situation

by power-point presentations, generally organized with an interactive case report followed by an exposition of the fundamental clinical aspects, differential diagnosis and therapy.

Textbook and teaching resource

Harrison’s, Principles of Internal Medicine Ed. McGraw Hill, 20’ ed.

Goodman and Gillman, The pharmacologica basis of Therapeutics Ed. Masson, 13’ed.

Goodman and Cecil, Medicine, 26th Ed.

Semester

Sixth year, first semester.

Assessment method

Oral examination, either in presence or in streaming on the webex platform in relation to the regulations related to the COVID-19 emergency. Any decisions ordered by the University will be communicated at the appropriate time.

Office hours

On appointment (e-mail)
