UNIVERSITÀ
DEGLI STUDI DI MILANO-BICOCCA

COURSE SYLLABUS

General Medicine

2122-5-H4101D333

Aims

The lessons aim to provide the student with basic information on aging, knowledge on the most important geriatric syndromes, on related epidemiological data and on the impact that aging processes have on life expectancy. Cultural tools will also be provided to encourage interaction between the geriatrician figure with other specialists and members of the care team. At the end of the course the student must know how to recognize the clinical symptoms of the clinical syndromes studied and set up an adequate first-line therapy. Furthermore, the lessons aim to provide students with the fundamental elements of Hematology

Contents

Aging, geriatric syndromes, their treatment. Clinical and therapeutic topics related to aortic valve stenosis, mitral valve disease, sudden death; principles of antibiotic therapy in the main infectious syndromes: sepsis, endocarditis, meningitis, pneumonia, pyelonephritis.
