COURSE SYLLABUS

Music and The Brain: The Neuro-musicology

2122-2-H4101D294

Aims

Provide students with the cognitive tools to understand the relationship between music and brain functioning in the light of the new acquisitions of neuroscience (neurophysiology, neuroimaging, cognitive sciences and neuromusicology) in the development in the individual and from the evolutionary point of view of musical perception and indicate the new paths of music therapy.

Contents

It will be divided into 4 meetings for a total of 8 hours on specific topics, with the participation, as well as the teacher in charge, of specialists in the individual topics. Because they like music, what happens in the brain of the listener, who performs and who writes music, musical therapies and other "curiosities" on the relationship between music and medicine.
