COURSE SYLLABUS

Internship in Research Laboratory 2

2122-2-H4101D064

Aims

Aim of the course in laboratory of Basic Sciences is to offer the students

- the possibility to approach the research activity
- to favor the development of a scientific mentality (useful in the training process of the doctor and subsequently in professional practice)
- possibility of acquiring a scientific methodology (as a transition from the experimental phase to the elaboration and critical discussion of the results)
- familiarize with the main experimental techniques and current issues in biomedical research.

Contents

The student follows the research activity carried out in a laboratory of Basic Sciences chosen by him

Detailed program

The student will accompany the researcher in the experimental activity in the field of the basic sciences of his laboratory

Prerequisites

None

Teaching form

The teaching method derives from the student's attendance at the chosen laboratory for the entire duration of the course

Textbook and teaching resource

The protocols used in the laboratory, the articles chosen from the literature concerning the research project

Semester

Agreed with the student

Assessment method

Interactive verification at the end of the course attendance.

Office hours

On appointment
