## SYLLABUS DEL CORSO

### Economia delle Aziende Biotecnologiche

2122-2-E0201Q076

---

#### Aims

The course will focus on the analysis of the main issues related to the business administration.

#### Knowledge and understanding:

This course offers students the basic knowledge of business economics and business administration in general and in Biotech companies, in particular relating to business systems, to different degrees of economic combinations and value-creating activities.

#### Applying knowledge and understanding:

Students will be able to identify and analyze the conditions of existence of companies as well as the different systems, economic and business combinations present in them. Through the comparison of cases, students will gain the knowledge needed to provide effective solutions for companies.

#### Making judgements.

Students must have the ability to analyze the main problems related to business administration, ie business strategy, governance, management and understanding the method of construction and the correctness of accounting records relating to individual management phenomena and the consistency of the same with the purpose of the business administration.

#### Communication skills.

Students must be able to clearly communicate the acquired knowledge, the underlying logic and the application

methods also to non-specialist; they must know and have adequate knowledge of business-economic terminology.

### Learning skills

The student will be able to integrate acquired knowledge to further studies in economics.
