DEGLI STUDI DI MILANO-BICOCCA

## COURSE SYLLABUS

### Basic Engineering Geology

2122-3-E3401Q042

---

#### Aims

Students will learn basic knowledge about engineering geology, soil and rock mechanics and application of principles to the analysis of geomaterials

Aim of the course is to provide basic and advanced knowledge concerning: engineering geological problems under subaerial and subaqueous conditions; problems linked to engineering structures, mining and environmental engineering; the physical mechanical behaviour of soil, rock and rock masses and their characterization; in situ stress state and its changes due to natural and anthropic action; seepage in porous media; soil and rock stability.

The student will be finally capable to understand how to apply engineering geological knowledge for solving geological and technical problems, for land use planning, construction of structures and infrastructures, modelling of physical and geological processes.

#### Contents

Theory: fields of interest; techniques and methods; engineering geological problems; hazard and risk concepts; geomaterials; principles of stress and deformation analysis; constitutive laws, time/deformation models; rheological models. Physical properties of soil and rock and their technical classifications. In situ stress in geological media and their changes. Water seepage and its role on in situ stress and soil/rock stability. Consolidation and settlements. Mechanical properties of soils: compressibility, shear strength, in different stress and drainage conditions. Mechanical properties of intact rocks and rock masses: resistance, deformability. Lateral earth pressure: elastic and plastic soil stability; ultimate bearing capacity. Soil and rock behaviour under dynamic conditions.

Lab exercises: physical and mechanical properties of soil and rock; in situ stresses; seepage, flow nets;

consolidation and settlement; earth pressure and bearing capacity.

## **Detailed program**

### **Prerequisites**

A base-level knowledge in geology, physics, mathematics and mineralogy is requested

### **Teaching form**

Lectures and lab activities

### **Textbook and teaching resource**

All the material used for the lectures is made available

### **Semester**

First Semester

### **Assessment method**

Oral exam

### **Office hours**

8.30 - 19.00

---
