# UNIVERSITÀ DEGLI STUDI DI MILANO-BICOCCA

# SYLLABUS DEL CORSO

## Microbiologia Clinica

**2122-2-I0302D009**

### Aims

To provide basic knowledge and diagnostic techniques of clinical microbiology.

To provide the knowledge of main routes of transmission of zoonotic diseases and of analytical methods for the diagnosis in biomedical and veterinary laboratories.

### Contents

Student's skills:

- Classification and identification of bacteria.

- Basic knowledge of infectious diseases.

- Gram positive and gram negative bacteria. Aerobe and anaerobe bacteria.

- Antibiograms and their interpretation according to EUCAST.

- Diagnosis of bacterial, viral, parasitical, fungal infections.

- Classification and identification of bacteria.

- Basic knowledge of infectious diseases.

- Gram positive and gram negative bacteria. Aerobe and anaerobe bacteria.

- Collection, transportation and treatment of biological samples.

- Techniques of culture, identification, interpretation.

- Quality controls: CQI and VEQ in Clinical Microbiology lab.

- Alert study, infectious diseases and nosocomial infections.

- The biological risk in Microbiology lab.

- Study of pathogens, in human and veterinary medicine, applied to laboratory diagnosis.

- Definition and classification of zoonoses, main diffusion routes. Role of the laboratory technician in the diagnosis of zoonosis.

- Diagnosis of viral, parasitic or mycotic zoonoses, in relation to different biological samples.

## Detailed program

Classification and identification of bacteria.

Basic knowledge of infectious diseases.

Gram positive and gram negative bacteria. Aerobe and anaerobe bacteria.

Collection, transportation and treatment of biological samples. Techniques of culture, identification, interpretation.

Diagnosis of bacterial, viral, parasitical, fungal infections.

Antibiograms and their interpretation according to EUCAST.

Quality controls: CQI and VEQ in Clinical Microbiology lab.

The biological risk in Microbiology lab.

Methods for the diagnosis of infectious diseases in the biomedical and veterinary laboratories.

Definition and classification of zoonoses, main diffusion routes.

Role of the laboratory technician in the diagnosis of zoonosis.

## Prerequisites

---

## Teaching form

Lectures and exercises

## Textbook and teaching resource

E. W.Koneman, S.D.Allen, W.M.Janda, Introduzione alla Microbiologia, Antonio Delfino Ed.

## Semester

First semester

## Assessment method

The final mark, based on the average score obtained by the students during the different evaluations, is set during an oral interview with the student, during which the written tests are scrolled to check mistakes

## Office hours

By appointement
