COURSE SYLLABUS

Venipuncture: From Theory To Practice

2122-3-I0303D037

Aims

Techniques of peripheral venous access retrieval: selection of appropriate procedures with recognition and management of complications.

Contents

Provide the theoretical and practical educational tools aimed at the acquisition of the necessary skills to find the peripheral accesses in order to use the correct flow and volume of contrast in the execution of radiological diagnostic exams

Detailed program

- Materials for the execution of the venipuncture
- Preparation of the patient
- Notion of sterility and management of sterile fields
- Obtaining peripheral venous access
- Management of the administration of the contrast
- Biohazard: Standards for patient and operator safety
- First aid techniques

Prerequisites

Third year of the Degree Course

Anatomy and physiology of the peripheral venous system

Teaching form

Lectures, practical exercises with dummy

Textbook and teaching resource

The teacher will provide educational materials

Semester

Second semester

Assessment method

Attendance

Office hours

By appointment required by mail.
