DEGLI STUDI DI MILANO-BICOCCA

COURSE SYLLABUS

Genetics

2122-1-I0201D127-I0201D035M

Aims

To know the organization of the human genome. Understand how genetic variants are generated and their consequences. Know the rules of the transmission of Mendelian characters. Know the classification of genetic pathologies and some example pathologies.

Contents

The course is intended to provide students with fundamental concepts on pathology and genetics relevant for their professional field

Detailed program

GENETICS:

Organization of the human genome (chromosomes and genes). Mitosis and meiosis, gametogenesis and Sex-determination. Genetic code, mutations, polymorphisms and their impact on proteins. Inheritance of mendelian traits and pedigrees. Classification of genetic disorders in humans (chromosomal, mendelian and non mendelian disorders). Examples of genetic diseases.

Prerequisites

DNA structure and replication - The flow of genetic information from

DNA to protein - Gene expression regulation

Teaching form

Lessons in attendance, subject to any ministerial changes following the COVID pandemic situation

Textbook and teaching resource

GENETICA: Dallapiccola

B., Novelli G., Genetica Medica essenziale, 2012, CIC Edizioni

Internazionali

Semester

First semester

Assessment method

Written exam: quizzes with multiple choice in attendance, subject to any ministerial changes following the COVID pandemic situation

Office hours

By appointment required by mail
