DEGLI STUDI DI MILANO-BICOCCA

SYLLABUS DEL CORSO

Internato di Chirurgia

2122-2-I0201D082

Aims

To provide the concepts necessary for understanding pathologies, indications and procedures of the orthopedic and trauma surgery field.

Contents

The clerkships will cover the most important aspects related to surgical and conservative treatment of muscle-skeletal pathologies as traumatic injuries, fractures as osteoarthritis. Students will acquire the basic knowledge required to approach an orthopaedics and traumatology patient.

Detailed program

- Approach an orthopaedics and traumatology patient

- Understand an orthopaedic and traumatological medical history

- Use the appropriate terminology to communicate with patients and medical staff

- Theory and practical skills to perform the basic clinical examination tests in general orthopaedics and traumatology.

- Basic concepts and observations activities regarding treatment of fractures in the operating room.
