

UNIVERSITÀ
DEGLI STUDI DI MILANO-BICOCCA

SYLLABUS DEL CORSO

Statistica I

2122-1-E4101B005

Learning objectives

The course is about **descriptive statistics**, both univariate and bivariate, for the analysis of data of various nature.

Contents

The course is about **descriptive statistics** and it is organized in two macro sections. The first part concerns **univariate statistics**, covering the notions of frequency distributions, measures of central tendency, variability and shape. _____

Detailed program

The course is devoted to descriptive statistics and it is divided in two macro sections.

- Preliminary concepts
- Frequency distributions
- Measures of central tendency

- Measures of variability

- Main graphical representations

- Symmetry, kurtosis and multimodality

- Categorical data and heterogeneity indexes

Section II: bivariate statistics

- Covariance and correlation
- Simple linear regression
- Partial correlation
- Analysis of variance
- Contingency tables
- Dependence among variables
- Time series

Prerequisites

There are no prerequisites. However, it is strongly recommended the knowledge of basic notions of mathematics.

Teaching methods

During the Covid-19 emergency lessons will be both in person and online.

Assessment methods

The exam is based on a **written test** and sometimes on an oral test. Students are required to attend the **oral examination** only if the grade of the written part is **greater or equal than 27 out of 30**.

Textbooks and Reading Materials

Textbook (in Italian)

- Piccolo, D. (2010), *Statistica*, Terza edizione, Il Mulino.

Reading material (in Italian)

- Cicchitelli, G. (2012), *Statistica principi e metodi*, Seconda edizione, Pearson.
- Piccolo, D. (2020). *Statistica per le decisioni*, Terza edizione, Il Mulino.

Moreover, additional teaching material (in Italian) will be available on the e-learning website.

Semester

The course is scheduled in the first semester.

Teaching language

Italian
