

# UNIVERSITÀ DEGLI STUDI DI MILANO-BICOCCA

# SYLLABUS DEL CORSO

# Laboratorio di Informatica

2122-1-E4101B004

### Learning objectives

This course will introduce the SAS system and R, with a special focus on their programming languages, to allow the student to acquire the necessary knowledge and skills to use SAS and R to analyze data.

#### Knowledge and understanding

This course will provide the basic knowledge and understanding on:

- Structured programming
- Managing tabular data in SAS (dataset)
- Managing tabular data in R (data frame)
- Data analysis in SAS

#### Ability to apply knowledge and understanding

At the end of the course the students will be able to:

- Write basic SAS programs for data analysis
- Write basic R programs for data analysis

### Contents

Introduction to SAS

Managing data with SAS

Introduction to R

#### **Detailed program**

Introduction to SAS, Data step e Proc step. import, Proc print

Proc contents, Proc Means, output, maxid

Proc Freq

ODS

Proc Sort, Merge

Proc Format

Introduction to R: syntax and a comparison with SAS

#### Prerequisites

None

#### **Teaching methods**

The course is taught in blended e-learning.

The lectures are in a computer lab and are dedicated to discuss how to tackle and solve some problems. Some videos will provide the necessary notions on SAS and R.

There are several exercises via e-learning, where the acquired knowledge is applied to solve some problems on tabular data.

#### **Assessment methods**

Written exam consisting of writing (at the PC) some short SAS programs to solve some problems. Moreover, there will be a multiple choice quiz to assess the knowledge of R.

The grading is based on correctness, completeness, simplicity of the proposed solution.

# **Textbooks and Reading Materials**

• "The Little SAS Book, SAS Institute

#### Semester

Second

# **Teaching language**

Italian
