#### **Contents**

The course aims to provide a basic knowledge on the philosophy of science by focusing on fundamental problems, such as the nature and the function of scientific laws and theories, the structure of explanation, of prediction and inferences aimed at acquiring scientific knowledge, the relationship between hypotheses and observational evidences, and the question of scientific realism.

In the first part of the course, these problems will be addressed in their general scope, in the second part, they will be developed with attention to the various fields of psychological sciences.

#### **Prerequisites**

None

#### **Teaching methods**

Teaching method consists of lectures accompanied by a critical discussion with the students on covered topics and concepts

In order to facilitate those students who do not attend classes, the teaching material (slides) is made available on the e-learning webpage of the course.

Lessons will be held in presence, unless further COVID-19 related restrictions are imposed.

#### **Assessment methods**

Assessment will consist of a written test with open questions. The questions are aimed at testing the effective

acquisition of the-topics illustrated during the course, as well as to ascertain the ability to manage the contents of the proposed bibliography and the capability to critically deal with them.

Participation in the optional activities (exercises, conferences, etc.) proposed during the course contributes to the final evaluation (only for attending students).

Upon the student's request, the exam can be integrated by an oral examination, on all the course topics.
