#### **Contents**

The course aims at presenting an overview of the problems related to the birth of scientific psychology, promoting

a critical reflection on the theoretical, methodological and epistemological assumptions and on the social ir

conditioning that have historically guided its development. It will focus on the origins, evolution and transformation of the main perspectives of research from the mid-nineteenth Century up to the present day, placing them in their proper historical context and highlighting their dominant research program.
Detailed program

•
Prerequisites
None
Teaching methods
Teaching method consists in lectures accompanied by a critical discussion with the students on illustrated topics and concepts.
Assessment methods
The grown will be considered out the grouph of written test, divided into a part with resulting above and a part with

The exam will be carried out through a written test, divided into a part with multiple-choice questions and a part with open questions. The questions are aimed at testing the effective acquisition of the-topics illustrated during the course, as well as to ascertain the ability to manage the contents of the proposed bibliography and the capability to critically deal with them.
