SYLLABUS DEL CORSO

Laboratorio: Metodi di Indagine Sperimentale in Psicologia del Pensiero e della Comunicazione

2122-3-E2401P105

Learning area

1: Knowledge and skills useful to understand, promote and change individual psychological functioning

Learning objectives

Knowledge and understanding

The relationship between psychology of thinking and psychology of communication. The research on cognitive aspects of reasoning

Applying knowledge and understanding

Methods of experimental research to examine reasoning processes. The opportunity to replicate some classical experiments in order to understand the role of language and communication in the study of thinking

Contents

Application of experimental psychology methods in the investigation of thinking, language, and communication.

Detailed program

- Psychology of thought, language, and communication
- Principles of research methodology
- Psycholinguistic resources

- Presentation of typical experimental paradigms
- Defining an experimental design
- Development of experimental materials
- Processing of collected data

Prerequisites

Familiarity with models and theories related to the study of thought and communication.

Teaching methods

Critical analysis in the psychology of thought and language. Practical exercises in the development, running, and presentation of an experiment in the field.

Lessons will be held in presence, unless further COVID-19 related restrictions are imposed.

Assessment methods

Short report or in-class presentation related to the project carried out during the lab activities.

Attendance is required.
