COURSE SYLLABUS

Insurance Law

2122-3-E1401A101

Learning objectives

- Grasp the essential dynamics of the insurance phenomenon and the foundations of insurance law.
- Know the main contents of insurance law.
- Acquire analytical tools that are necessary to understand legal problems concerning the insurance phenomenon.

Contents

The course is focused on the insurance business and is aimed at providing students with essential tools and categories in order to understand the status and the evolution of insurance law and regulation. First, we will examine the economic dynamics of the phenomenon and the essential steps of its historical development. Against this background, we will explore the main components of the Italian law and regulation concerning insurance firms and contracts, analyzing with more detail some selected topics that are currently debated by scholars and judges.

Detailed program

- _____
- Regulation of insurance firms: foundations, developments, essential features.
- Regulation of insurance distribution: types of intermediaries and client protection.
- Regulation of insurance contracts: general rules; non-life insurance; life insurance; personal accident insurance.

For attending students
