SYLLABUS DEL CORSO

Macroeconomia M

2122-2-F8204B025

Learning objectives

Enable students to understand fundamental issues in growth and business cycle theory, and to estimate business cycle models.

Contents

The course presents key developments in advanced macroeconomic theory. The student will be able to interpret the "stylized facts" concerning growth and the business cycle, using advanced tools of modern macroeconomic theory.

Detailed program

- The first part of the course addresses two key issues: i) what determines long-run growth; ii) why is per capita income in some countries higher than elsewhere. Topics include the role of technical change, savings rate, population growth. (Solow model and Ramsey-Cass-Koopmans model)
- The second part presents a model without markets imperfections, where technology shocks drive economic fluctuations (Real Business Cycle model).
- The third part incorporates nominal rigidities (wage and price stickiness) into RBC models, the so called New Neoclassical synthesis (New-Keynesian model). Other frictions will be also considered (Christiano, Eichenbaum and Evans model).
- The fourth part analyses the introduction of financial variables and frictions in macroeconomic models (financial accelerator model), and how these topics relate to asset prices and yields determination (CCAPM).

- Students will learn the basic tools for model simulation and estimation, using Dynare.

Prerequisites

Standard undergraduate courses in maths, statistics, micro and macro.

Teaching methods

Classroom lectures and laboratory tutorials. Project preparation.

Assessment methods

Written exam (two questions), 6/9 of final mark. Evaluation focuses on methodological rigour and analysis of theoretical models.

Project preparation, 3/9 of final mark. Evaluation focuses on knowledge of software and interpretation of empirical results.

Textbooks and Reading Materials

D. Romer, *Advanced Macroeconomics*, McGraw-Hill

J. Galí, *Monetary Policy, Inflation, and the Business Cycle: An Introduction to the New Keynesian Framework and Its Applications*, Princeton University Press
