# **SYLLABUS DEL CORSO**

# L'Arte di Costruire Case Studies

2122-1-F8802N006

## Learning objectives

This course aims to provide students key definitions and concepts about case studies. Student will learn how to design and implement a case study. More precisely, students will be supported in: a. identifying and defining their object of study; b designing a case of study based on the use of the appropriate mix of quantitative and qualitative research techniques.

#### **Contents**

Knwoledge about the *case study* research tool and the fields where it is usually applied. Development of skills in designing and implementing a *case study*.

## **Detailed program**

Definition of case study and reasons behind the use of this research approach.

Criteria for selection, choice and demarcation.

Types of case studies and fields of application.

Case study design, techniques for data collection and analysis.

Reporting a case study.

Examples of case studies from different fields of application.

# **Prerequisites**

Basic knowledge of quantitative and qualitative research tecniques and on the mixed methods approach.

# **Teaching methods**

Theoretical lectures, empirical examples of case of studies in different fields of application.

Hands on experience of a case study's design and implementation.

#### **Assessment methods**

Students must present and discuss a case study designed and developed during the course.

At the final oral exam, students will be required to answer questions regarding the course contents.

# **Textbooks and Reading Materials**
