COURSE SYLLABUS

Statistical Methods For Management

2122-1-F7701M093-F7701M104M

Learning objectives

The course aims to present to students the statistical methods, that are typically applied to multivariate data.

Contents

Multivariate statistical data analysis

Detailed program

· Multiple linear Regression

· Principal Components Analysis

· Cluster Analysis

· Correspondences Analysis

· Dicriminant Analysis

Prerequisites

Elements of asymptotic inference and descriptive statistics

Teaching methods

35 hours of theoretical lectures, 5 cfu, in physical presence, according to sanitary emergency policies.

Assessment methods

A paper (report), written in ENGLISH or in ITALIANO on an application on a data set of one or two tools presented in the course, by producing, in SPSS softwre, the output and developing a punctual comment on it Then, the student will have a theoretical talk about the course program.

Textbooks and Reading Materials

Slides in e-learning website, in italian

In english:

- G. Chow, ECONOMETRICS, Mc Graw Hill,

chapter on "general linear regression", only

- W. Hardle, L. Simar APPLIED MULTIVARIATE STATISTICAL ANALYSIS, Method & Data Tecnologies ed.

chapters 11, 13, 14, 15, 22 (in 2019-20 edition)

Semester

First Semester

Teaching language

Italian
