UNIVERSITÀ DEGLI STUDI DI MILANO-BICOCCA

COURSE SYLLABUS

NeuroAnatomia

2021-SP028D104

Aims

To   review   and
deep the basic knowledge of neuroanatomy and apply this knowledge to better
understand central nervous system diseases.
Some relevant topics will be treated, according to the available teaching time.

Contents

Functional neuroanatomy of the central nervous system and anatomic basis of some central nervous system diseases.

Detailed program

Organization of the central nervous system: functional neuroanatomy

Limbic system : cortical and subcortical components, functions, limbic system disorders.

Blood supply of the central nervous system: functional anatomy, anatomical variants and clinical syndromes

Prerequisites

None

Teaching form

Frontal lessons in presence and in streaming.

Textbook and teaching resource

```
Slides of the lecture.

During the lectures, relevant scientific publications related to the topic will be su
ggested
```

Semester

February

Assessment method

Attendance

Office hours

By e-mail appointment
