COURSE SYLLABUS

Data Analysis Applied to the Environment: Sounscape as Index (Curricular - Environment)

2223-94R-SCGA33

Titolo

Data analysis applied to the environment: Soundscape as index of environmental quality

Docente(i)

Giovanni Zambon ; Roberto Benocci

Lingua

English

Breve descrizione

The concept of soundscape will be applied to terrestrial and marine habitats through the analysis of both natural (geophonies and biophonies) and non-natural sounds (anthrophony, that is the complex of sounds produced by human activity).

Topics:

- Introduction to environmental acoustic

- Introduction to soundscape as index of environmental quality

- Introduction to “R” program and data analysis

- Computation of indices performed in “R” environment

- Analysis and interpretation of the results

Evaluation: NO

CFU / Ore

1 CFU - 8 hours (8h lecture)

Periodo di erogazione

II semester
