COURSE SYLLABUS

Functional Anatomy of The Stomatognathic Apparatus

2223-2-H4601D037

Aims

Aim of the course is to analyze the cranio-cervical and stomatognathic anatomy showing how the different anatomic structures work together to obtain specific functions and in particular chew and swallow

Contents

Analysis of the functions of stomatognathic apparatus analyzing the muscular, articular and teeth's morphology. This allows to create a relationship between anatomical shape and functionality of the system

Detailed program

Analysis of the movements of mandible, hyoid bone and cervical spine during mandibular movements, chewing and swallowing:

muscular activation

TMJ movements

Relationship between the shape and the function of different teeth

Morfogenic function of the complex tongue-lips-cheeks on the development of the face

Prerequisites

Human anatomy

Teaching form

Lecture

Textbook and teaching resource

I.A. Kapandji

Physiology of the joints

Churchill Livingstone

Semester

Second semester 1st year

Assessment method

active participation to the activities

Office hours

By appointment after phone or mailing contacts

Sustainable Development Goals
