COURSE SYLLABUS

Connection Between Occlusion and Posture. Kinesiological Analysis

2223-5-H4601D067

Aims

Illustrate the method of Kinesiology Applied to Dentistry for the clinical evaluation of malocclusions and possible relationships with chronic recurrent pathologies affecting posture

Contents

Assess the type of malocclusion and relate the masticatory dysfunction with postural pathologies

Detailed program

1. Notions of anatomy and physiology of the masticatory organ
2. Concept of masticatory dysfunction and various types of dental malocclusion
3. The Crusader Pass
4. the cross step and the relationship with the chewing function
5. Malocclusion and postural dysfunction
6. Mouth and feet, breaking points of muscle tension
7. Meersemann test
8. Kinesiological analysis of the occlusion
9. Kinesiological analysis between occlusion and postural pathologies
10. Practical test of the Meersemann test
11. Evaluation of clinical cases

Prerequisites

Basic notions of Gnathology

Teaching form

tutoring

Textbook and teaching resource

gnatologic lessons

Semester

first semester

Assessment method

active partecipation to the activities

Office hours

Monday 800-900

Sustainable Development Goals

GOOD HEALTH AND WELL-BEING
