COURSE SYLLABUS

Internship Public Medicine

2223-4-H4101D263-H4101D087M

Aims

Knowledge of the clinical and organizational characteristics of General Practice / Family Medicine and its role in primary health care and in the Health Service.

Contents

Practical experience at GP office

Detailed program

Knowledg of the organization of work in Family Medicine. Evaluate the epidemiology of diseases / problems in primary health care. Observe the healthy and sick person in his living environment (family, work, socio-cultural context ...). Evaluate the doctor / patient relationship in General Practice (trust, negotiation, information, discussion ...). Observe the relationship with the specialist doctor and with other local services. Evaluate the clinical method and approach to problems in General Practice.

Prerequisites

Teaching form

The module includes a 35 hours practical internship at the General Medical Practice and two classroom sessions: introduction and debriefing

Textbook and teaching resource

Caimi V., Tombesi M. Medicina Generale (certain chapters) UTET 2003.

Digital learning material

Semester

2nd semester

Assessment method

Report on the activities carried out at the General Practice and a final written exam. The test consists in multiple-choice questions; students select one correct answer from several choices in order to evaluate the cognitive skills.
