COURSE SYLLABUS

Pathology and Immunology

2223-2-H4101D255

Aims

At the end of the course, students will have acquired the knowledge of the molecular and cellular basis responsible for the pathogenetic mechanisms underlying the most common pathologies. The course also includes a part of genetic pathology focused on understanding the basis of genetic diseases in humans and a part of immunology for understanding the pathologies of the immune system

Contents

Molecular and cellular basis responsible for the pathogenetic mechanisms underlying the most common pathologies.

Bases of genetic diseases in humans

Molecular and cellular basis of the functioning of the immune system

Detailed program

The extended course program is detailed in the Genetic Pathology and General Pathology and Immunology modules

Prerequisites

Human Physiology

Teaching form

Lectures and laboratories teaching

Textbook and teaching resource

The teaching resources are detailed in the Genetic Pathology and General Pathology and Immunology modules

Semester

Second year, second semester

Assessment method

The assessment method is described in the Genetic Pathology and General Pathology and Immunology modules

Office hours

On request, by appointment
