COURSE SYLLABUS

Principles of Medical Semeiotics

2223-2-H4101D011-H4101D032M

Aims

Knowing how to make a complete history collection and learn the semeiological techniques for an accurate general objective examination of the patient and specific for the abdomen chest heart

Contents

The Semeiotic Course on Simulator carried out with practical exercises with dummies-simulators is aimed at the first learning of the techniques of approach to the patient and the main semeiological maneuvers to be applied in the objective examination, in preparation for the future professional activity carried out in the following years directly on the patient. The tutoring activity involves small groups of students, with the constant presence of the teacher in order to provide the basis for the first approach to theoretical knowledge and to the practical learning of multiple medical, surgical and emergency semeiological maneuvers.

Detailed program

- general approach to the patient
- Anamensis physiological, pharmacological anamnesis, familial, proximal pathological and remote pathological
  Objective examination
  Inspection percussion palpation and auscultation of:
  -heart
  -Chest
  -abdomen
  Detection of vital parameters with particular emphasis on the methods and techniques of blood pressure

measurement

Prerequisites

Knowledge of the introductory courses indicated in the Degree Course regulations

Teaching form

Lectures, exercises

Textbook and teaching resource

Slides

Semester

2nd years, 2nd semestres

Assessment method

Quiz with multiple choice to verify the acquired kwoledge

Office hours

On appointment by sending a mail to fosca.quarti@unimib.it and raffaella.delloro@unimib.it

Sustainable Development Goals

GOOD HEALTH AND WELL-BEING
