COURSE SYLLABUS

Pedagogy Workshop

2223-1-G8501R001-G8501R044M

Course title

General pedagogy laboratory

Topics and course structure

The laboratory combined with the General Pedagogy Course is about observation and in particular about observation as a professional tool for educators and teachers.
Observation in educational and school contexts is faced in a practical and targeted way thanks to direct activities and exercises managed individually and in groups.
The workshops take place during the General Pedagogy course (end of October - December of the first semester).
There are several laboratory shifts in order to ensure that female students can choose times and days that are compatible with any other commitments.
The calendar of the workshops and the registration procedures are communicated during the course.
The laboratory is approved for those who have participated in all the meetings, a condition for accessing the written test of the General Pedagogy exam.

Objectives

With the constant and participatory attendance at the Laboratory connected to the course, we intend to promote:

- knowledge of the observation tool and its applications in an educational context;
- understanding the centrality of observation in the educational and teaching-learning process;
- the development of an observational attitude and competence in students and female students.

Methodologies

Individual and group exercises, video observations, analysis of observational protocols, discussion.

Online and offline teaching materials

Students have at their disposal a handout on the subject of observation in educational and school contexts which is part of the exam bibliography. The Handout is useful for introducing theory on the subject of observation and its use in educational and school contexts.

During the course, two lessons are dedicated to the subject of observation in order to guarantee all students additional elements of knowledge useful for actively participating in the workshops.

The materials used and produced during the workshops can be placed on the pages of the workshops by the individual conductors

Programme and references for attending students

Programme and references for non-attending students

Assessment methods

The laboratory does not foresee any final tests. Approval is subject to the attendance of all meetings

Office hours

Programme validity

The laboratory attended and approved is valid for the entire university career

Course tutors and assistants

The laboratories are conducted by teachers appointed as conductors. The names are communicated with the calendar of laboratory shifts.
