DEGLI STUDI DI MILANO-BICOCCA

## COURSE SYLLABUS

### Materials Physics

2223-3-E2701Q045-E2701Q048M

---

#### Aims

Provide the student with the basis for understanding the physical properties of materials and their measurement.

#### Contents

Introduction to the physics of materials: mechanical, elastic, electronic and magnetic properties.

#### Detailed program

##### PHYSICS OF MATERIALS

##### Crystal Structures

- General Description of Crystal Structures
- Some Important Crystal Structures
- Cubic Structures
- Close-Packed Structures
- Structures of Covalently Bonded Solids
- Crystal Structure Determination
- 

##### X-Ray Diffraction

- Bragg Theory

- Lattice Planes and Miller Indices
- General Diffraction Theory
- The Reciprocal Lattice
- The Meaning of the Reciprocal Lattice
- X-Ray Diffraction from Periodic Structures
- The Ewald Construction
- Relation Between Bragg and Laue Theory

### **Bonding in Solids**

- Attractive and Repulsive Forces
- Ionic Bonding
- Covalent Bonding
- Metallic Bonding
- Hydrogen Bonding
- van derWaals Bonding

### **Mechanical Properties**

- Elastic Deformation
- Macroscopic Picture
- Elastic Constants
- Poisson's Ratio
- Relation between Elastic Constants
- Microscopic Picture
- Plastic Deformation
- Estimate of the Yield Stress
- Point Defects and Dislocations
- The Role of Defects in Plastic Deformation
- Fracture

### **Thermal Properties of the Lattice**

- Lattice Vibrations
- A Simple Harmonic Oscillator
- An Infinite Chain of Atoms
- One Atom Per Unit Cell
- The First Brillouin Zone
- Two Atoms per Unit Cell
- A Finite Chain of Atoms
- Quantized Vibrations, Phonons
- Three-Dimensional Solids
- Generalization to Three Dimensions
- Estimate of the Vibrational Frequencies from the Elastic Constants
- Heat Capacity of the Lattice
- Classical Theory and Experimental Results
- Einstein Model
- Debye Model
- Thermal Conductivity
- Thermal Expansion
- Allotropic Phase Transitions and Melting

### **Electronic Properties of Metals: Classical Approach**

- Basic Assumptions of the Drude Model

- Results from the Drude Model
- DC Electrical Conductivity
- Hall Effect
- Optical Reflectivity of Metals
- The Wiedemann–Franz Law
- Shortcomings of the Drude Model

### **Electronic Properties of Solids: Quantum Mechanical Approach**

- The Idea of Energy Bands
- Free Electron Model
- The Quantum Mechanical Eigenstates
- Electronic Heat Capacity
- The Wiedemann–Franz Law
- The General Form of the Electronic States
- Nearly Free Electron Model
- Energy Bands in Real Solids
- Transport Properties

### **Semiconductors**

- Intrinsic Semiconductors
- Temperature Dependence of the Carrier Density
- Doped Semiconductors
- n and p Doping
- Carrier Density
- Conductivity of Semiconductors
- Semiconductor Devices
- The pn Junction
- Transistors
- Optoelectronic Devices

### **Magnetism**

- Macroscopic Description
- Quantum Mechanical Description of Magnetism
- Paramagnetism and Diamagnetism in Atoms
- Weak Magnetism in Solids
- Diamagnetic Contributions
- Contribution from the Atoms
- Contribution from the Free Electrons
- Paramagnetic Contributions
- Curie Paramagnetism
- Pauli Paramagnetism
- Magnetic Ordering
- Magnetic Ordering and the Exchange Interaction
- Magnetic Ordering for Localized Spins
- Magnetic Ordering in a Band Picture
- Ferromagnetic Domains
- Hysteresis

### **Dielectrics**

- Macroscopic Description
- Microscopic Polarization

- The Local Field
- Frequency Dependence of the Dielectric Constant
- Excitation of Lattice Vibrations
- Electronic Transitions
- Impurities in Dielectrics
- Ferroelectricity
- Piezoelectricity
- Dielectric Breakdown

## Prerequisites

Good knowledge of General Physics and techniques of integral and differential calculus. Basic knowledge of Quantum Physics.

## Teaching form

Lectures (in italian)

## Textbook and teaching resource

- [Solid State Physics: An Introduction, di Philip Hofmann](#) (Main reference book)
- [Principi di Fisica dei Semiconduttori di Mario Guzzi](#) (Semiconductor book)
- Notes from the lecturer.

## Semester

I Semester

## Assessment method

The Physics examination of the Materials with the Laboratory is divided into oral tests, with the compilation of a laboratory report. The Materials Physics course with Laboratory is composed of 14 CFU. The exam is divided into three modules, one relative to the laboratory and two modules dedicated to theory. These three modules can be passed either simultaneously or separately.

The two modules of Physics of Materials are focused on the theory of physics of materials and have a relative weight equal to 5/14 and 6/14. The first module begins with the crystalline structures and ends with the classical description of electrons in solids. The second module begins with the quantum description of electrons in solids and ends with the dielectrics.

## **Office hours**

at the end of the lessons or by appointment

## **Sustainable Development Goals**

AFFORDABLE AND CLEAN ENERGY | INDUSTRY, INNOVATION AND INFRASTRUCTURE

---
