COURSE SYLLABUS

Assessment and Treatment of Whiplash

2223-2-I0201D070

Aims

Improvement of knowledge on pathophysiology, biomechanics and relationship with the complex framework of detectable signs and symptoms.

Contents

Describe whiplash trauma and systemic effects. Explain evaluation and intervention methods

Inform students about the multi-system damage inflicted by whiplash trauma. To exemplify methods of investigation, damage assessment, and various intervention protocols.

Detailed program

aspects of biomechanics and pathophysiology of the cervical spine pathophysiology of whiplash, clinic, recovery times, treatment hypotheses (bibliographic review) treatment hypotheses:

- weighted joint movements
- myofascial inhibition techniques (spray and stretching, muscle energy techniques, positional release ..)

Prerequisites

Enrollment in the second year of the Degree Course in Physiotherapy

Teaching form

practical frontal lesson and lab

Textbook and teaching resource

Research in scientific literature

Semester

annual

Assessment method

Set of final questions to reaffirm the main knowledge acquired. It does not assign votes

Office hours

by appointment

Sustainable Development Goals

GOOD HEALTH AND WELL-BEING
