DEGLI STUDI DI MILANO-BICOCCA

## SYLLABUS DEL CORSO

### Genetica

2223-1-I0202D138-I0202D005M

---

#### Aims

The course aims at developing the students' understanding of the basic concepts in genetics

#### Contents

The chromosome. Cell division. Errors in chromosome mechanics. Fertilization. Inheritance and Mendel's Laws. The transmission of genes.

#### Detailed program

- The chromosome. Function and architecture
- Cell division for cell growth and reproduction (mitosis and meiosis)
- Errors in chromosome mechanics
- Fertilization
- Inheritance and Mendel's Laws
- The transmission of genes / of mendelian diseases in human trees
- Normal and pathological human karyotype.

#### Prerequisites

none

## **Teaching form**

Lessons in the presence of the teacher.

## **Textbook and teaching resource**

Slide lecture of the teacher

## **Semester**

First Semester

## **Assessment method**

Written exam: quizzes with single / multiple choice

## **Office hours**

by appointment by email request

## **Sustainable Development Goals**

GOOD HEALTH AND WELL-BEING
