

UNIVERSITÀ DEGLI STUDI DI MILANO-BICOCCA

COURSE SYLLABUS

Endoscopic Procedures Digestive, Respiratory, Urological

2223-2-I0101D106

Aims

Develop knowledge about endoscopic procedures such as diagnostic and therapeutic opportunities in the field: digestive, respiratory, urology. Observe conduction of endoscopic procedures and nursing approach in the endoscopic room. Identify the skills of professionals working in the endoscopy service.

Contents

The application of non-invasive endoscopic technologies in diagnosis, monitoring and treatment of many diseases of different organ systems (gastrointestinal, genitourinary, thoraco-bronchial tree, etc..) is required with increasing frequency compared to traditional surgical treatment.

The characteristic of invasiveness of these procedures cause significant physical and mental stress in people; these states can increase with age or compromised conditions, therefore is required a specific and competent nursing process.

People who undergo endoscopic examination, have fundamental rights: the efficiency of the endoscopic instruments, the expertise of those who use them, the knowledge and expertise of nurses who use the instruments, safety and environmental hygiene

Detailed program

Endoscopy as a diagnostic-therapeutic approach The main procedures in digestive endoscopy The main procedures of respiratory endoscopy

Prerequisites
Registration for the 2 nd year of the Degree Course in Nursing
Teaching form
Lectures, demonstrations
Textbook and teaching resource
texts proposed by the teacher

Assessment method

frequency

Semester

second semester

Office hours

Sustainable Development Goals
