### SYLLABUS DEL CORSO

## Tirocinio in Tecniche di Radioterapia

2223-3-I0303D016-I0303D070M

#### **Aims**

#### **NUCLEAR MEDICINE:**

Equipment: Gamma Camera, Single Photon Emission Scintigraphy (SPECT), Positron Emission Tomography (PET). The preparation of radiopharmaceuticals.

The reception and patient positioning, the execution of SPECT, PET and PET/CT investigations.

#### RADIOTHERAPY:

Equipment: Simulator, CT, Linear Accelerator.

The reception of the patient; mode of positioning and immobilization of the patient; the setting of the radiation treatment; the execution of the treatment.

#### MEDICAL PHYSICS:

Quality control on equipments, radioprotection of patients and workers

#### **Contents**

By the end of the third year of training, the students will be able to conduct Nuclear Medicine diagnostic

investigations and Radiotherapy treatments, knowing the functioning of equipments and the procedures for processing and archiving of produced images.

The students will also be able to respect and apply the standards of radioprotection for patients and workers.

They will know conventional, dedicated techniques.	, contrastographic	radiological	techniques	and	СТ	and	MRI	diagnostic
Detailed program								
Prerequisites								
Teaching form								
Traineeship								
Textbook and teaching resource	•							
Semester								
First and second semester								
Assessment method								
Oral examination								
Office hours								
By appointment required by mail								
Sustainable Development Goals								
GOOD HEALTH AND WELL-BEING
