

UNIVERSITÀ DEGLI STUDI DI MILANO-BICOCCA

SYLLABUS DEL CORSO

Sistemi e Servizi di Telecomunicazione

2223-1-F1801Q129

Aims

Provide the notions necessary to understand the main network design and management issues in multimedia communication, enterprise and residential connectivity

Contents

- 1. Introduction to Communication Theory, Multiplexing and Transmission Media
- 2. Broadband Access Networks
- 3. WAN Connectivity
- 4. Networking Devices and Software-Defined Networking
- 5. Quality of Service in Networks
- 6. Voice Coding and Voice-over-IP
- 7. Mobile Radio Networks
- 8. Content Delivery Networks

Detailed program

- 1. Introduction to Communication Theory, Multiplexing and Transmission Media
- · Transmission channel and channel capacity
- · Analog and digital modulation
- Frequency, time and code multiplexing
- Multiple access
- · Twisted pair

- Optical fiber
- Radio transmission

2. Broadband Access Networks

- Copper-based networks, fiber-based networks and mixed copper/fiber networks (FTTE, FTTH, FTTC, FTTB)
- · xDSL technology and vectoring
- Fixed wireless access (FWA)
- · Satellite networks with GEO and LEO (low latency) satellites

3. WAN Connectivity

- · Dedicated and generalized connectivity
- MPLS protocol and related signaling protocols (LDP, RSVP-TE)
- Virtual private networks (VPN): VLAN Ethernet, MPLS virtual private LAN service, IP tunneling

4. Networking Devices and Software-Defined Networking

- · Router and switch architecture
- Firewall, IDS, load balancer and anti-DDoS architecture
- Basic principles of SDN
- OpenFlow protocol
- Basic principles of Network Function Virtualization (NFV)

5. Quality of Service in Networks

- Service Level Agreement e Traffic Conditioning Agreement
- Policing, shaping and marking techniques
- Scheduling techniques
- Call Admission Control (CAC)
- Integrated Services (IntServ)
- Differentiated Services (DiffServ)

6. Voice Coding and Voice-over-IP (VoIP)

- Waveform codec
- Source codec
- Hybrid codec
- · Causes of voice degradation in packet switching networks
- VoIP signalling: Session Initiation Protocol (SIP)

7. Mobile Radio Networks

- Basic concepts on cellular networks
- Network planning
- 2G (GSM e GPRS)
- 3G (UMTS e HSPA)
- 4G (LTE)
- 5G

8. Content Delivery Network (CDN)

- Principles and architecture
- DNS redirection and URL rewriting

Akamai's CDN

Prerequisites

Basic notions of TCP/IP networking; having attended the course "Treatment and coding of multimedia data" (or similar) is a plus

Teaching form

Fourty hours of classroom lectures and ten hours of practical exercises, with the help of a network emulator (Mininet)

Textbook and teaching resource

On-line material on the course website, mainly slides and additional documents

Reference textbooks:

- Jim Kurose, Keith Ross, Computer Networking A Top-Down Approach, 8th Edition, Pearson, 2021 (o relativa versione italiana intitolata "Reti di Calcolatori e Internet Un Approccio Top-Down")
- Martin Sauter, From GSM to LTE-Advanced Pro and 5G: An Introduction to Mobile Networks and Mobile Broadband, 4th Edition, Wiley, 2021

Semester

First Year, Second Semester

Assessment method

The assessment is carried out through a written test and a following optional oral examination, which can be requested by the student or by the teacher

Office hours

By appointment
