SYLLABUS DEL CORSO

Gestione della Conoscenza

2223-1-F1801Q111

Aims

The student will acquire specific notions and competences to contribute in a critical and proactive way to the design of technological and organizational solutions aiming at the promotion of knowledge management within organizations and communities of practice.

Contents

The course deals with the issue of knowledge management starting from the historical and organizational context in which it was conceived and developed. The course critically describes the main kinds of technological solutions that have been developed to support knowledge management in different organizations and in Communities of Practice. The course discusses and compares case studies to show how the different contexts require the design of technological solutions tailored to the specific needs of the involved community of practice. The course presents various examples of technologies for supporting the circulation and sharing of knowledge within organizations and real communities.

Detailed program

- Motivations, history and basic concepts of Knowledge Management (KM).
- The model of creation and circulation of tacit and explicit knowledge by Nonaka and Takeuchi.
- The Communities of Practice (CoP Wenger).
- From Document Management Systems (DMS) to Knowledge Management Systems (KMS).
- How to stimulate the circulation and sharing of information and knowledge in organizations: some problems and issues, and an example of prototypal system.
- Social media use in organizations.

- Presentation, discussion and comparison of some case studies of KMS in real organizations.
- Classifications and ontologies: a critical view.
- Expertise management: an example (DEMOIR).
- ConsiderIt: an example of technology supporting the circulation and sharing of different opinions among citizen during ballots.

Prerequisites

The course does not require specific prerequisites, but for a basic knowledge about Information and Communication Technologies (ICT). However, it is important that the student owns a specific interest in the themes of the course which combines technological aspects with issues related to the organizational or social context in which the technology is put to work.

Teaching form

Vis a vis lessons, seminars of experts, and collective discussions of themes during the lectures, recitations, practical examples discussed during the laboratory

The complete material is available in the e-learning area of the course

Semester

?? Semester

Assessment method

The assessment includes both a written examination and an oral examination.

Office hours

The student can contact the teachers by email in order to fix an appointment
